

SRAVAN RAVULA

Senior Cloud Engineer | Full-Stack Developer | Generative AI & DevOps

908-420-0323 | kumar.ravulaa@gmail.com | linkedin.com/in/sravanravula | github.com/sravan4262 | im-sravan-ravula.dev | Fort Lauderdale, FL

SUMMARY

Senior Software Engineer with 9+ years of experience designing and delivering scalable cloud-native applications, distributed systems, and AI-powered solutions. Expertise in C#, .NET, Terraform, React, and Generative AI, building secure enterprise platforms and modern full-stack applications across Azure, AWS, and GCP.

Independently built and launched two production applications — including Byte AI (iOS & Web) and Infinity Finances — and co-founded TrueSpend, delivering products end to end from architecture and cloud infrastructure to AI integration, web, mobile, and production deployment.

EXPERIENCE

Senior Cloud Development Engineer

Oct 2025 – Present

Citrix Fort Lauderdale, FL

- Engineer and operate multi-cloud infrastructure across Azure, AWS, and GCP for FedRAMP High-compliant systems.
- Lead architecture and design reviews and drive cross-team technical decisions for critical platform, reliability, and migration initiatives.
- Built a C# tool on Azure OpenAI that triages security vulnerabilities end to end — classifying issues, determining the owning team, and auto-creating and assigning Jira tickets — replacing a manual weekly review (several engineer-hours) with an automated daily run.
- Migrated 4 Windows VMs to lightweight Linux Kubernetes pods, eliminating Windows licensing and idle compute to cut cloud spend by ~\$20K/year.
- Built a daily pipeline to clean up orphaned Azure managed images left behind by other automation, recovering ~\$2K/month (~\$24K/year) in unused storage spend.
- Replaced an error-prone, multi-hour weekly policy-deployment process with a Jenkins pipeline (C#/PowerShell) that enforces Azure Policy across the FedRAMP boundary — now a one-click deploy, near-eliminating manual effort.
- Integrated Azure OpenAI summarization into operations workflows to condense incident logs and generate alert explanations, accelerating incident response.
- Contributing to the team's FedRAMP High authorization — audit in progress — through security hardening and compliance automation.
- Re-architected Splunk telemetry from pull-based to push-based ingestion (Splunk Cloud via HEC tokens), reducing operational overhead.
- Mentor engineers and establish automation and operational best practices; own on-call rotation and lead production incident response.

Senior Full-Stack .NET Web Developer

Jan 2018 – Sep 2025

UPMC Health Plan Pittsburgh, PA

- Led platform initiatives end to end through the full SDLC — from architecture and design reviews through deployment and production support.
- Owned 10 microservices, 25 worker services, and 8 databases end to end — building scalable back-end services and RESTful APIs in C#, .NET 8, and ASP.NET Core.
- Led migration of poorly performing on-prem wildcard search to Azure AI Search, delivering sub-second results on large text fields — a >98% latency reduction (load-tested).
- Mentored junior engineers and established coding standards, code-review, and CI/CD best practices across the team.
- Integrated Azure OpenAI to enable natural-language queries and generate actionable workflows.
- Implemented CI/CD pipelines in Azure DevOps (YAML) and deployed via Azure App Service, cutting deployment time from ~8–10 minutes to under 2 minutes.
- Built dynamic, responsive front-ends with Angular and React, managing application state with Redux.
- Designed data storage and caching across SQL Server, Azure Cosmos DB, and Redis, with reliable async messaging (NServiceBus over RabbitMQ).
- Deployed Solr Cloud distributed search on Red Hat OpenShift with Docker; designed microservices on a multi-client SaaS architecture.

Full-Stack .NET Web Developer

Jan 2017 – Dec 2017

Accenture Washington, DC

- Optimized SQL Server queries and stored procedures, improving performance by 75%.
- Developed distributed services using WCF (SOAP) for reliable client-server communication and seamless data exchange.
- Built rich desktop applications with WPF using the MVVM architecture for clear separation of concerns and maintainability.
- Enhanced front-end interactivity with jQuery (DOM manipulation, AJAX) and integrated InRule for dynamic business-rule management.

PROJECTS

- Byte AI** — Tech-focused social platform (iOS & Web, ~50 daily active users) [byteaiofficial.com](#) · [App Store](#)
- Built and shipped a full social platform end to end: .NET 9 API, Next.js / React web, native SwiftUI iOS, PostgreSQL/Supabase, SignalR real-time chat, and APNs push notifications.
 - Engineered hybrid semantic search combining self-hosted ONNX embeddings (nomic-embed-text, pgvector) with PostgreSQL full-text search, fused via Reciprocal Rank Fusion.
 - Built a personalized "For You" feed that ranks content by cosine similarity to per-user interest embeddings.
 - Integrated Google Gemini for automatic content tagging, quality scoring, and a two-layer content-moderation pipeline.
 - Deployed on Azure with blue-green releases and multi-platform CI/CD (GitHub Actions: .NET, Vercel web, iOS TestFlight).

- Infinity Finances** — FIRE & retirement planning web app (live) [firecalculator-app.vercel.app](#)
- Built a multi-calculator financial-independence platform (Next.js / React, Hono API, Supabase) with a month-by-month portfolio simulation engine featuring Monte Carlo analysis and tax-optimized withdrawal sequencing.
 - Integrated Google Gemini for conversational data entry — structured extraction of planning inputs from natural language.

- TrueSpend** — Co-Founder · Geo-based credit-card rewards optimizer (in development, iOS TestFlight) [truespend.org](#)
- Building a React Native + Expo app with a .NET 9 backend that recommends the optimal rewards card on arrival at a merchant using background geolocation (iOS CLVisit / Android fused location).
 - Integrated Plaid (transactions), Stripe (3-tier billing and entitlements), and Azure OpenAI (nightly reward-optimization insights); deployed on Azure Container Apps with Terraform IaC.

SKILLS

Expertise	C# · .NET · Microservices · React / Next.js · SQL · Azure · GenAI / LLMs · Terraform
PROFICIENCY	
Languages & Frameworks	ASP.NET Core, Web API, Entity Framework, TypeScript, Node.js, MediatR, FluentValidation, WCF, WPF / MVVM, Swift
Frontend & Mobile	Angular, Redux, React Query, Zustand, Tailwind CSS, React Native, Expo, SwiftUI
Cloud & DevOps	Azure Functions, App Service, Container Apps, Service Bus, Key Vault, Kubernetes / AKS, Docker, AWS, GCP, Azure DevOps, CI/CD (YAML), GitHub Actions, Jenkins, OpenShift, PowerShell, FedRAMP High, SRE & reliability, observability (Application Insights, AppDynamics, Sentry, Serilog)
AI & Search	Azure OpenAI, LLM integration, prompt engineering, embeddings, vector search (pgvector), semantic & hybrid search, Azure AI Search, ONNX, Claude, Gemini, Solr
Data & Messaging	SQL Server, PostgreSQL, Azure Cosmos DB, Redis, Supabase, NServiceBus, RabbitMQ, Splunk, HL7
Integrations & Practices	REST, OAuth / OIDC, SignalR, Stripe, Plaid, push notifications (APNs / FCM), Jira, SaaS, unit testing (xUnit, Vitest, Playwright), TDD, SDLC, Agile / Scrum / SAgile, SOAP

EDUCATION

- M.S., Electrical Engineering** — [University of Missouri–Kansas City](#) Aug 2015 – Dec 2016
- B.S., Electronics Engineering** — [KL University](#) 2011 – 2015
